

Ceramic sink product care and cleaning instructions

- Always wipe the sink down with warm soapy water and a cloth. This will remove general everyday stains from your sink. For ceramics china rubbers will clear most marks, we recommend these are used with washing up liquid.
 - In hard water areas limescale deposits can build up on the sink over time. The limescale can become strongly coloured by such foods as coffee and red wine etc, we recommend the use of lemon juice or vinegar to remove this. Simply apply, leave for a few minutes and rinse away with water.
 - If stains become ingrained in the bowl, an overnight soak using diluted biological washing powder should remove the marks easily. Ensure you thoroughly rinse the sink with water afterwards.
 - For further advise on cleaning products please contact our Customer Service team on Tel: 0117 938 1900 or email: service@caple.co.uk
 - We recommend the use of baskets, grids and chopping boards to help reduce the risk of accidental damage.
 - You must not pour strong chemicals down the sink such as bleach, ammonia, caustic soda, white sprit and sterilising solutions. If this should accidentally happen, quickly wipe the spill away and rinse with plenty of water.
 - We do not recommend the use of a plastic washing up bowl, as particles of grit which may be impregnated in the base of the bowl could scratch surface of the sink.
 - Do not chop food directly on the sink surface, as this will cause damage. Wooden chopping boards are available for this purpose.
 - Avoid dropping sharp objects into the sink, as this may scratch or damage the surface.
 - Leaving neat bleach in the sink can cause damage to all sinks even stainless steel. If neat bleach should come into contact with this product, please rinse thoroughly with warm soapy water.
